

User Story – History Section

Title: History – Case Communication, Notes and Diary Management

As a CRM user,

I want to view and record all case-related communications, notes, diary activities within the **History** section,

So that I can maintain a complete chronological record of all interactions and activities associated with a case.

History Screen

The **History** section shall provide a chronological record of all activities generated against the case.

The History screen shall support the following activities:

- Send Letter
- Send Email
- Incoming Call
- Outgoing Call
- Notes / Notes Tagging
- Diary

Each successfully generated activity shall automatically create a corresponding **History record** against the case.

The History listing should display key information such as:

Posted Date | Action Type | Details | Handler/User Name | Posted Time

Users shall be able to search and filter History records. Selecting a History item should allow the user to view the relevant details/content in a **viewing/preview pane**.

1. Send Letter

The user shall be able to generate and send/create a letter from the History section.

On selecting **Send Letter**, a letter interface shall open containing:

Correspondent

A dropdown allowing the user to select the relevant correspondent associated with the case.

Template

A dropdown allowing the user to select the required letter template. (For Now, only Accident Report Form)

History Details

A field displaying/allowing the user to enter the description that will appear against the generated History record.

The user shall be able to **edit** the generated letter before completing the action.

Once the letter has been generated/accepted, the system shall automatically create a History record showing the appropriate action type and description.

Diary within Send Letter

A **Diary** option shall be available directly within the Send Letter interface.

Selecting Diary shall allow the user to create a follow-up diary entry without leaving the letter workflow.

The Diary interface shall support:

- Action (Make a Call, Send Email, Letter , SMS, Other)
- Diary For / Assigned User (Dropdown user ids)
- Correspondent (user email id/username)
- Date/Time
- Notes/Description

This allows, for example, a user to send a letter and immediately create a diary reminder to follow up on that correspondence.

2. Send Email

The user shall be able to compose and send an email directly from the History section.

The Send Email interface shall include:

Template – Select an available email template or proceed without a template.

To – Recipient email address.

CC – Carbon-copy recipients.

BCC – Blind-carbon-copy recipients.

Subject – Re: Case Reference Number/

History Details – Description/details to be recorded in History.

Email Body – Rich-text area allowing the user to compose or edit the email.

The interface should also support relevant actions such as **attachments**, **editing**, **spell check**, and **saving to drafts**.

Once the email is successfully sent, a corresponding **Send Email** event shall automatically be generated in History, including the relevant subject/details.

Diary within Send Email

A **Diary** option shall also be available directly within the Send Email interface.

The user shall therefore be able to create a follow-up diary activity while composing/sending the email without having to leave the email workflow.

3. Incoming Call Event

The user shall be able to record an **Incoming Call** against the case.

When Incoming Call is selected, the system shall display an interface containing:

Correspondent – Person/organisation from whom the call was received.

Phone Phrase / Call Type – Select the appropriate incoming-call phrase/type. (CL -Call to Client etc)

History Details – Details/notes regarding the incoming call. (By default – Phone phrase should be shown)

The user shall be able to edit the History Details to record relevant information discussed during the call.

On accepting/saving the call event, an **Incoming Call** entry shall automatically be created within the case History with the date, time, user and relevant details.

4. Outgoing Call Event

The user shall be able to record an **Outgoing Call** against the case.

The interface shall provide:

Correspondent – Person/organisation being contacted.

Phone Phrase / Call Type – Select the relevant outgoing-call phrase/type. (CL -Call to Client etc)

Phone Number – Display/select the relevant telephone number associated with the selected correspondent.

History Details – Record the details/outcome of the call. (By default – Phone phrase should be shown)

On accepting/saving the event, an **Outgoing Call** History record shall automatically be created against the case.

5. Notes & Notes Tagging

Users shall be able to create a **Note** against a case from the History section.

The Note functionality shall allow the user to:

- Enter a note title/subject where required.
- Enter the note content/details.
- Tag the note using an appropriate **Note Type/Category**.
- Associate the note with the current case.
- Record the user who created the note.
- Automatically record the date and time of creation.

Once saved, the note shall appear as a separate event within the History timeline/list.

The note tag/category should be visible or identifiable from the History record so that users can distinguish different types of notes.

6. Diary Management

Diary functionality shall be available in **two ways**:

1. Standalone Diary – The user can create a Diary entry directly from the History section.

2. Embedded Diary – The user can create a Diary entry while working within the **Send Letter** or **Send Email** interface.

The Diary functionality shall support:

- Action
- Diary For / Assigned User
- Correspondent
- Template where applicable
- Due Date /Time
- Notes/Description

The user shall be able to assign the diary activity to themselves or another relevant CRM user.

Once created, the Diary entry shall be associated with the relevant case and should be available through the CRM's diary.

Acceptance Criteria

AC1 – History Listing: All supported case activities shall be recorded and displayed chronologically within the History section.

AC2 – Letter: A user can select a correspondent and template, generate/edit a letter and create the appropriate History record.

AC3 – Email: A user can select recipients/template, compose an email, add attachments where required and send it from the History section. A History event shall be created after sending.

AC4 – Incoming Call: A user can record an incoming call, select the correspondent/call type, enter call details and save it as a History event.

AC5 – Outgoing Call: A user can record an outgoing call, select the correspondent/call type and phone number, enter call details and save it as a History event.

AC6 – Notes: A user can create and tag a note, and the note shall be stored against the case History.

AC7 – Standalone Diary: A user can create and assign a Diary entry directly from the History section.

AC8 – Letter Diary: A user can create a Diary entry directly from within the Send Letter workflow.

AC9 – Email Diary: A user can create a Diary entry directly from within the Send Email workflow.

AC10 – Audit Information: Each generated History event shall record the relevant **date, time and user/handler**.

AC11 – Search & Filters: Users shall be able to search History and filter records by relevant criteria such as correspondent and action/activity type.

AC12 – Record Viewing: Selecting a History record shall allow the user to view the associated details/content without losing the context of the History screen.

AC13 – Case Association: Letters, emails, calls, notes and diary activities created through History shall always be associated with the case from which the History section was opened.

Action types:

SL – Send Letter | SE – Send Email | IC – Incoming Call | OC – Outgoing Call | NT – Note | DY – Diary
