

User Story - Task Management Screen

The Task Management screen will act as a centralized operational workflow system where Claims, Fleet, Recovery teams can manage daily activities, follow-ups and pending operational actions.

Flow of Task Management Screen

1. Task Listing Screen (Main Screen)

When the user opens the “Task Management” screen from the sidebar, the system will display a centralized listing of all tasks according to the user’s role and permissions.

The screen will contain:

- Search Bar
- Filters
- Create Task Button
- Task Cards/List
- Pagination

Users will be able to:

- Search tasks
- Filter tasks
- View assigned tasks
- Update task statuses
- Open linked claims directly from tasks

2. Task Creation Flow

Step 1 - User Clicks “Create Task”

A modal/popup drawer will open.

Step 2 - User Enters Task Information

Mandatory Information

- Task Title
- Description/Notes
- Assigned User
- Department
- Due Date
- Due Time
- Priority (Low, Medium, High)
- Status (Pending, In progress, Overdue, Awaiting Response, Rejected, Completed)

Optional Information

- Claim Reference
- Vehicle Registration
- Attachment Upload

Step 3 - Save Task

Once saved:

- Task appears in the listing screen
- Task gets linked with related claim/vehicle (if selected)
- Assigned user can view the task in “My Tasks”
- Dashboard widgets update automatically

3. Task Assignment Workflow

Tasks can be assigned to:

- Claims Team
- Fleet Team
- Recovery Team

Example:

- **Claims Handler creates task:**
“Upload Missing Documents”
- **Assigns it to:**
“Recovery Team”
- **Adds due date:**
“Tomorrow 4 PM”

Assigned user will then see:

- Pending task in their dashboard
- Due date indicator
- Priority badge

4. Task Status Workflow

Each task will move through operational stages.

Status Flow

Pending → In Progress → Completed

Additional statuses:

- Awaiting Response

- Overdue
- Rejected

Example Operational Flow

Example 1 - Claims Team

Task:

“Call customer regarding missing claims documents”

Status Flow:

- Pending
- In Progress
- Awaiting Response
- Completed

Example 2 - Fleet Team

Task:

“Vehicle return overdue follow-up”

If due date passes:

- System automatically highlights task as “Overdue”

5. Dashboard Integration

The Task module will directly feed dashboard widgets.

Dashboard Widgets

My Tasks

Shows:

Tasks assigned to logged-in user

Overdue Tasks

Shows:

Tasks past due date

Critical Tasks

Shows:

High Priority/P1 tasks

Pending Follow-ups

Shows:

- Tasks awaiting action

6. Task Card Behaviour

Each task card will display:

- Task Title
- Task description (Helping Text)
- Claim Reference
- Vehicle Registration
- Assigned User
- Priority Badge
- Status Badge
- Due Date and Time

Task Card Quick Actions

Users can directly:

- Mark Complete
- Edit Task
- Add Notes
- Reassign Task
- Open Linked Claim

without opening full task detail screen.

7. Search & Filters Workflow

Users can filter tasks by:

- Status
- Priority
- Department
- Assigned User
- Date Range
- Claim Reference
- Vehicle Registration

Example:

Fleet Manager filters:

- Status = Overdue
- Department = Fleet

System shows only overdue fleet tasks.

8. Notifications & Alerts

System should show:

- Due Today tasks
- Overdue task indicators
- Assignment notifications

Example:

“If a task due date passes, system automatically marks/highlights it as Overdue.”

9. Linked Claim Behaviour

If task is linked with claim:

- Clicking claim reference opens claim details page
- Users can directly access related case information

10. Permissions & Access

Users should only:

- View tasks according to permissions
- Edit tasks assigned to them or their department
- Admin can access all tasks

11. Attachments Support

Users should be able to:

- Upload documents
- Upload screenshots
- Upload images/PDFs

Useful for:

- Missing documents
- Engineer reports
- Vehicle inspection images

12. Pagination & Performance

The listing screen should support:

- Pagination
- Lazy loading
- Fast filtering/search

This is important because task volume will grow significantly over time.

13. UI/UX Expectations

The screen should feel:

- Operational
- Clean
- Modern
- Fast to navigate

Use:

- Color-coded statuses
- Priority indicators
- Hover effects
- Sticky filters
- Responsive layout
- Minimal clutter

14. Future Enhancements (Post-MVP)

Later phases may include:

- Kanban Board
- Drag & Drop Tasks
- SLA Tracking
- Recurring Tasks
- AI Suggested Tasks
- Workflow Automation
- Outlook/Google Calendar Sync
- WhatsApp Notifications
- Team Workload Analytics
