

User Story:

Real-Time Notification & Alert Management System

As a Claims Handler, Fleet Coordinator, Recovery Agent, Manager or System User,

I want to receive real-time notifications and alerts related to claims, fleet operations, tasks, assignments, mentions and workflow activities,

So that I can stay updated on operational activities, respond quickly to pending actions and improve overall workflow efficiency across the CRM.

Core Notification Functionalities

1. In-App Notification Center

System should provide a centralized notification panel accessible from the top header/navigation bar.

Notifications should include:

- ✓ Task Assignments
- ✓ Task Status Updates
- ✓ Claim Status Changes
- ✓ Activity Log Mentions/Tags
- ✓ New Notes Added
- ✓ Document Upload Alerts
- ✓ Overdue Tasks
- ✓ Fleet Return Alerts
- ✓ Engineer Report Updates
- ✓ Payment/Recovery Updates
- ✓ AI Damage Detection Completion
- ✓ Reminder Notifications
- ✓ System Alerts

2. Activity Log Mention Notifications

Workflow:

If a user is tagged/mentioned in:

- ✓ Activity Logs
- ✓ Notes
- ✓ Comments
- ✓ Internal Discussions

System Behaviour:

Tagged user receives:

- ✓ In-app notification
- ✓ Email notification (Optional)

Example:

Ayesha tagged you in Claim #CLM-2026-001 regarding missing engineer documents.

3. Reply/Thread Notifications

If a tagged user replies to a note/comment:

- ✓ Original tagged person receives notification.

Example:

Ruby Uddin replied to your comment in Claim #CLM-2026-001.

4. Task Notifications

System should notify users for:

- ✓ New Task Assigned
- ✓ Due Today Tasks
- ✓ Overdue Tasks
- ✓ Task Reassigned
- ✓ Task Completed
- ✓ High Priority/P1 Tasks

Example:

You have been assigned a High Priority task: Upload Engineer Report.

5. Fleet Notifications

Fleet users should receive alerts for:

- ✓ Vehicle Return Due
- ✓ Vehicle Off-Hire
- ✓ Plate Expiry
- ✓ MOT Expiry
- ✓ Insurance Expiry

6. Claim Workflow Notifications

Notifications should trigger when:

- ✓ New Claim Created
- ✓ Claim Status Updated
- ✓ Claim Closed
- ✓ Missing Documents Requested
- ✓ Engineer Report Uploaded
- ✓ Settlement Received

7. Email Notification Support

System should support optional email notifications for critical activities.

Email triggers include:

- ✓ Claim Assignment
- ✓ High Priority Tasks
- ✓ Overdue Tasks
- ✓ Client Going Abroad Alert

- ✓ Claim Closure
- ✓ Document Requests

8. Reminder & Escalation Notifications

System should automatically:

- ✓ Remind users before due dates
- ✓ Escalate overdue activities to managers
- ✓ Highlight unresolved critical tasks

Example:

Task overdue by 2 days - escalation sent to Team Manager.”

9. Notification Categories

Users should be able to filter notifications by:

- ✓ Claims
- ✓ Fleet
- ✓ Recovery
- ✓ Tasks
- ✓ System Alerts
- ✓ Mentions
- ✓ High Priority

10. Role-Based Notification Visibility

Notifications should appear according to:

- ✓ User role
- ✓ Department
- ✓ Assigned permissions

Example:

Fleet users should not see recovery notifications unless authorized.

11. Notification UI/UX Behaviour

Features:

- ✓ Bell icon with unread count
- ✓ Real-time updates (Recent activity alerts)
- ✓ Read/Unread states
- ✓ Click notification → opens linked record directly
- ✓ Infinite scroll/pagination
- ✓ Sticky notification panel
- ✓ Priority color coding
- ✓ Timestamp of notifications

12. Future Enhancements

Future phases include:

- ✓ **Push Notifications**
- ✓ WhatsApp Notifications
- ✓ SMS Alerts
- ✓ AI Suggested Alerts
- ✓ SLA Breach Notifications
- ✓ Workflow Automation Triggers
- ✓ Outlook/Microsoft Teams Integration

Acceptance Criteria

1. Users receive notifications based on role and activity.
2. Tagged users receive instant alerts.
3. Notifications redirect users to the related screen/claim/task.
4. System automatically highlights overdue and critical items.
5. Email notifications work for configured critical actions.
6. Notification center updates in real time without page refresh.
7. Users can mark notifications as read/unread.
8. Managers receive escalation alerts for overdue operational tasks.
9. Dashboard widgets update dynamically based on notification-related actions.
10. Notification system must support scalability for high operational volume.
