

User Story: ABI & BHR Charges Screen

User Story

As a **Claims Handler**,

I want the system to auto-fetch ABI/BHR rates, calculate charges, and generate a Payment Pack dynamically,

So that I can accurately raise invoices, track payment statuses, and avoid manual repetitive calculations.

Functional Requirements / System Behaviour

Payment Pack Sent Detail Section

System Actions

When the user clicks “**Generate Payment Pack**” CTA:

1. **Payment Pack Raised Date**

System automatically records the date when the payment pack was generated.

2. **Payment Pack Sent Date**

System auto-fetches this date from the action of generating the pack.

3. **Invoice Number**

System automatically sets the **Case Reference Number** as the Invoice Number.

4. **Days Expired from Payment Required**

System starts a live calculation: Days Expired = Current Date – Payment Required Date

(Updates daily without manual input)

5. **Date Hire Paid**

Field will be editable manually for now.

Later, it will auto-update once payment is received.

Payment Pack Charges Section

System Calculations

All rates will be fetched from the **Hire Details Screen**.

A. ABI Charges (0–30 Days)

System fetches:

- Daily Rate (ABI)
- Extra Charges
- Admin Charges
- Number of Hired Days

Then the system calculates:

Total Hire Charge = (Daily Rate + Extra Charges) × Number of Days

B. 31–60 Days Charges (+10%)

System applies **+10% additional charges** on:

- Daily Rate
- Daily Rate + Extra Charges
- Total Hire Charges
- Admin Charges

Formula:

Updated Value = Base Value + (10% of Base Value)

Penalty Due Date:

Payment Pack Generate Date + 60 Days

C. 61+ Days Charges (+20%)

System applies **+20% additional charges** on:

- Daily Rate
- Daily Rate + Extra Charges
- Total Hire Charges
- Admin Charges

Formula:

Updated Value = Base Value + (20% of Base Value)

Penalty Due Date:

Payment Pack Generate Date + 61(+) Days

D. 90 Days + BHR (35% Surge)

System fetches BHR Rate from Hire Details (which is ABI Basic Rate + 35%).

Calculations:

BHR Daily Rate = ABI Daily Rate + 35%

Penalty Due Date:

Payment Pack Generate Date + 90 Days

Billed Breakdown Section (ABI 30 days Rate)

System will display reflective calculations for:

- Credit Hire (Hire Details) – Hire Charge per day * No of days
- Admin Charges
- Storage Charges (Relevant Screen)
- Recovery Charges(Relevant screen)
- Engineers Charges
- Plating Charges

These values(Credit hire , Admin Charges) are taken from 0 - 30 day calculations.

Generate Payment Pack – Output Files

When user clicks **Generate Payment Pack**, the system will generate a ZIP file that contains:

1. **Front Cover Information**
2. **Covering Letter**
3. **Credit Hire Invoice**
4. **Breakdown of ABI Hire Cost (30 Days)**
5. **Plating Cost Invoice**
6. **Hire Period Validation Form**

All populated using dynamic data from the CRM.

Acceptance Criteria

- ✓ Payment Pack dates auto-populate on clicking Generate Payment Pack
- ✓ Invoice number = Case Reference Number
- ✓ Days expired auto-updates daily without manual input
- ✓ Date Hire Paid is editable manually for now
- ✓ ABI daily rates, extra charges, admin charges fetched from Hire Details screen
- ✓ Total hire charges calculated automatically
- ✓ Penalty dates correctly calculated for each range (30, 60, 61+, 90 days)
- ✓ Billed breakdown shows ABI 30-day rates only
- ✓ ZIP file auto-generated with all required documents
